Dear Joe,

As you know, we have worked on a number of difficult and challenging projects together. They include high tech projects for Raytheon Missile Systems, as well as medical projects for Yavapai Regional Medical Center, the Southern Arizona Veterans Administration Health Care System and the Gila River Indian Community. All of our clients have had demanding requirements for design, budget and schedule.

Managing projects of these complexities can be very difficult to do. However, we can always count on you and your organization to come through for us on every project. The deadlines are always met, even when they change. We can count on a high level of accuracy and completeness in your construction documents. During the construction administration portion of the project, we can count on the quality of your work to get the project built in a way that minimizes change orders.

Our clients frequently put us in a position of having to maximize the quality of work, while minimizing the budget. This is not always easy. However, you have always brought fresh ideas and solutions to each challenge given to you, and have improved the final product for the Owner. This ultimately makes us look good, and allows us to get repeat work.

It has been a pleasure working with you and your organization, and look forward to working with you in the future.

Sincerely,

Bruce Wyckoff, AIA  
Project Manager
